# Kaivac AutoVac Stretch

Kaivac's AutoVac™ Stretch™. Kaivac's extreme soil removal technology, combined with a quick-change Lithium-ion Power Pack and unique single-fill recycling option, enables unprecedented cleaning range in a walk-behind machine – without loss of cleaning effectiveness. It offers scrubber drier performance at a fraction of the cost, and complexity.

## Highlights:

- Cleans 25,000+ sq. ft. per hour
- Add a second Power Pack for even greater cleaning range
- Reduces water usage by 75% or more
- Reduces cleaning chemical usage by 66% or more
- Easy to learn and use with the KaiTutor™ onboard video training system
- Easy to maintain and repair – no technician needed!
- Uses high flow fluid extraction, removes all soils, both visible and invisible, leaves floors dry and safe

## Cleaner, Shinier Floors

In tests performed by a major university, the AutoVac™ system removed up to 99.8% of targeted soil. This was slightly better than an scrubber drier, which removed up to 99.4%. A brand new microfiber mop only removed 50.9%. Plus, in gloss meter testing, the system's gentle, non-abrasive cleansing action resulted in approximately 25% shinier floors.

## Cleans Faster

Due to the unique one-fill process, independent performance tests show that users can clean more than 25,000 square feet per hour by eliminating unnecessary trips to refill. Plus, most users can skip dust mopping and trail mopping for even greater productivity.

## Reduces Water and Chemical Usage

Kaivac's extreme soil removal technology enables users to reuse or 'recycle' the cleaning solution without loss of cleaning effectiveness. This not only conserves water by 75% or more, but reduces chemical usage by 66% or more.

# Kaivac AutoVac Stretch

## Low Cost of Cleaning and Ownership

For starters, the initial purchase price is about 70-80% less than an equivalently sized scrubber drier! In many cases it's less than an scrubber drier's average annual maintenance cost. Plus, improved productivity, major chemical saving and 65% lower maintenance costs make for a very quick return on investment.

## Easy and Inexpensive to Maintain – No Technicians Required!

With so few moving parts, very little can go wrong. And if it does, it's so easy to troubleshoot and fix, unlike most cleaning equipment. Even better, the system doesn't require a technician to maintain or fix. And in most cases, an entire unit can be reconditioned in minutes for less than the cost of a single service call.

## Perfect for:

- Hallways
- Lobbies
- Cafeterias
- Gymnasiums
- Warehousing
- Shop Floors
- Healthcare
- Education
- Retail
- Daily floor cleaning
